

Bitumode BETA-P

Produced by the Modern Waterproofing Company, Bitumode is a line of polymer-modified bitumen waterproofing membrane of the highest quality. Bitumode is modified by APP & APAO, this guaranteeing superior performance under various conditions.

Bitumode BETA-P is reinforced with composite polyester (P) of non-woven polyester armoured with glass fiber filament which provides highly mechanical properties and dimensional stability.

USES

- Single layer roofing system for high performance requirements.
- Double layer system for basements, tunnels, and underground structures subject to moderate water pressure.
- Double layer roofing system combined with DELTA-G fiberglass reinforced.
- Toilets and wet areas inside buildings.
- Retaining walls.
- Under raft foundations.
- Bridge deck waterproofing.

BITUMODE BETA-P with mineral slated finish is recommended for exposed roofing system (unprotected) for non-accessible roofs or roofs subject to low traffic conditions.

ADVANTAGES

- Easy to apply (by torch).
- High mechanical properties.
- Absolute impermeability to water.
- Flexibility at low temperature up to -10° C.
- Excellent high temperature performance.
- Resistant to soil chemicals and salts up to certain limits.
- Excellent adhesion on any surface.
- High dimensional stability.
- Environmentally friendly.
