

ROFLEX

Plastomeric waterproofing membrane modified with top quality APP polymers and reinforced with non-woven polyester.

USES

- Single layer roofing system for normal use.
- Double layer roofing system.
- Waterproofing of toilets, wet areas inside buildings.
- Slab on grade.
- As part of two or three layer system in underground structures and basements.
- **ROFLEX** with mineral slated finish is recommended for exposed roofing system (unprotected) for non-accessible roofs or roofs subject to low traffic conditions.

ADVANTAGES

- Easy to apply (by torch).
- High mechanical properties.
- Absolute impermeability to water.
- Excellent high temperature performance.
- Excellent adhesion on any surface.
- High dimensional stability
- Environmentally friendly
