

MDERN BITUBOARD

Is a semi rigid pre-formed Protection Board made of modified bitumen membrane which is reinforced with strong reinforcement and coated with polyethylene film on both sides.

USES

MDERN BITUBOARD provides excellent protection to waterproofing systems and forms a protective layer against sharp stones when backfilling. It also protects the waterproofing systems from damage caused by impact of tools and equipment at the site or damage caused by steel fixers. The boards can withstand high heat and will remain stable and not change dimensions.

ADVANTAGES

- Avoids the need for masonry or screed protection.
- Compatible with all waterproofing systems .
- Resistant to corrosive salts in groundwater.
- Robust, durable and flexible.
- Can be applied vertically or horizontally.
- Excellent for tanking systems, sub-structures, retaining walls.
- Compatible with bituminous torch applied or self-adhesive membranes.

APPLICATION

MDERN BITUBOARD is installed over waterproofing membranes. It can be easily cut with a cutter and can be shaped to fit any profile. The board is semi-rigid to facilitate shaping and installation. Depending on the waterproofing system, the board may be welded into position using a gas torch or held in place by a compatible cold bituminous adhesive. On vertical applications **MDERN BITUBOARD** should be held in place by spot bonding.
